■ Operation Timing Diagram

※The waveforms of 'Operation indicator' and 'CC-LINK or EtherCAT output' are for Light ON. The waveforms are reversed for Dark ON.

■ Functions

○ Background sensing mode

This function instructs adjusting angle to install the product by displaying presence of the background object in the status display when installing the product. Use this function when sensing is unstable due to the reflection from the background object or any obstacle.

○ Installation guide mode

This function displays whether the sensing target is in the stable position of the guide line when installing the product through the output indicator. Entering installation guide mode and pressing key starts teaching.

○ Sensing level setting

This function sets sensitivity by dividing receiving light into 5 levels for stable sensing. Use this function when some of the channels shows low sensing level due to the bent glass plate or diffused reflection. Factory default is level 5.

○ Output option

After setting output option, press key to set additional option.

Output option (status display)	Description	Additional option	Output option (status display)	Description	Additional option
0	Returning to operation mode	—	4	Changing error output	a: A point b: B point
1	Status display orientation	F: Forward b: Backward	5	CC-LINK version	1: Ver 1.1 2: Ver 2.0
2	Channel ordering		6	CC-LINK station and points	1: 1 station 32 points 2: 2 station 64 points
3	Operation mode	l: Light ON d: Dark ON			

○ Self-diagnosis

This function runs self-diagnose periodically in normal operation and displays the part in error at the status display when error occurs.

• Channel interference alarm: Outputs alarm when interference from another sensing target and external object in a channel area.

• Disturbing light sensing alarm

: Outputs alarm when the receiver received external light besides light from the emitter.

When the amount of disturbing light is under the affective level, the product operates normally in disturbing light operation mode.

• Emitter/Receiver damage alarm

: Outputs alarm when emitter/receiver is damaged due to the long-term usage of emitter/receiver elements or strong impact to the product.
